### ABOUT ME

---

**Frontend Developer**

### WORK EXPERIENCE

---

#### Frontend Developer

**Net Plus** [ 18/02/2023 – Current ]

**City:** Belgrade | **Country:** Serbia

I am currently involved in the development of software focused on generating websites(made in React). In this role, my task is to contribute to a project that enables users to receive a comprehensive solution upon purchasing a license, including a website with its own domain and a corresponding mobile application for both Android and IOS developed in React Native. The opportunity to work in a team environment at the company has further enriched my skills and experience in the software development industry.

Technologies: React and React Native

#### Frontend Developer

**Internship Centar Nit** [ 10/02/2022 – 05/11/2022 ]

**City:** Novi Pazar | **Country:** Serbia

I taught the basics of programming to a group of high school students while serving as a mentor. I taught them the fundamentals of web construction and styling throughout our first three months of concentrating on HTML and CSS. We studied JavaScript for the following three months, covering fundamental programming ideas like variables, functions, and event handling. During the last three months, we taught students how to create dynamic and interactive web applications by diving into React. Students worked on practical projects throughout this time, which helped them use their skills and create their own websites and applications. Their confidence and programming abilities were much increased by this experience, and they received nothing but favorable feedback.

### LANGUAGE SKILLS

---

**Mother tongue(s):** Serbian

**Other language(s):**

**English**

**LISTENING** C1 **READING** C1 **WRITING** B2

**SPOKEN PRODUCTION** B2 **SPOKEN INTERACTION** C1

*Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user*

## DIGITAL SKILLS

---

HTML / CSS / JavaScript / React / React Native / Typescript / Redux Toolkit / Git / Linux / Tailwind / Firebase / TanStack Query / React, Next.js, React Native

## PROJECTS

---

**Constructorly Mobile App** I led a large project in the field of construction management as a committed and results-driven software developer, using my knowledge of TypeScript and React Native to produce a solid mobile application.

I created and implemented a feature-rich app for construction project management in this project. It was an application with a feature-rich interface that included separate modules for Workers and Project management.

The app made it easier for project managers to create and keep track of construction projects, each with a wealth of important data and meticulous details. The organization of the projects was based on discrete scenarios, each with a number of sub-situations. Important project information was easily arranged and available, including the start and end dates, cost estimates, and project status (active or inactive).

In addition, the application offered a specific area for overseeing construction workers. Important details about each employee, such as their personal information and hourly rate, were included in their profile. This function aided in effective workforce management as well as accurate tracking of labor expenses.

React Native and TypeScript were part of the technology stack, which guaranteed a cross-platform solution with a responsive user interface. This strategy ensured the application's scalability and maintainability while also improving the user experience.

I proved my ability to use creative software solutions to handle the intricate demands of construction management by completing the project successfully. This experience demonstrated my mastery of TypeScript and React Native, as well as my commitment to producing beautiful, user-friendly applications that both meet and surpass client expectations.

Technologies: React Native, Typescript, Zustand, Async Storage  
Components: Custom components made for Text, Inputs, etc...

**Disney Plus Clone** Making Disney Plus Clone where I used a lot of new technics. Data's are stored in Firebase. For design, I used styled components. Whole project is written in Typescript. Every movie has own description and own trailer. To check it out, you need to authenticate with google first.

**Covid Tracker** Website for tracking new Covid19 cases, in whole world. For design, I used tailwindcss with classic css, data comes from live api. This project was complicated because of new journey with dates.

Link: <https://my-covid-virus-tracker.netlify.app/>

**CryptoCurrency** This is my first bigger project that I worked on with my colleagues, using github, every single one had their own tasks. This is website for checking online cryptocurrencies, with all coins and exchanges.
